SUMMARY

I have a proven track record of success as a collaborative team player. With over four years of experience designing and developing high-quality software applications, I possess exceptional problem-solving skills and am dedicated to continuous learning and staying current with industry trends.

SOFT SKILLS

- Communication • Leadership • Time Management
- Problem-Solving • Multitasking

TECHNICAL SKILLS

- Typescript • JavaScript • SQL • MongoDB • Nest.js
- Redis • ReactJS • MySQL • Express.js • Git • Celery
- Postgres • RabbitMQ • JWT • TailwindCSS • Nodejs
- Bootstrap • Postman • Swagger • Redoc

WORK EXPERIENCE

Enforca — Backend Engineer, June 2025 - Present

- Built and maintained backend services for five products — Meride-Haven, a ride-matching platform for airport arrivals, Idonatio, a platform that enables organizations to collect and manage donations professionally, and AltBucks a micro-task platform enabling users to earn rewards through surveys, tasks, and referrals. Taskgynie, a mission-driven home services platform connecting customers with trusted local service providers for household tasks. Enforca Sandbox, an Edu-tech platform that helps students learn tech skills while being monitored by human mentors.

- Developed core booking and matching logic for Meride-Haven, including driver-passenger assignment, trip scheduling, fare calculation, and real-time trip status updates.

- Implemented secure onboarding and identity workflows for drivers and passengers, with verification steps and automated notifications.

- Designed and optimized donation flows for Idonatio, including contribution processing, donor management, campaign tracking, and automated receipts.

- Built payment handling, transaction logging. Added robust webhook handling and background task processing for time-sensitive operations like ride updates, donation confirmations, and payout events.

- Implemented payment handling for mentees seeking premium learning experiences, built mentor, mentee and admin dashboards with proper analytics for each type of user.

Skilled Crow — Full-Stack Software Engineer (Dev Studio) Remote, October 2024 - June 2025

- Work within a development studio to design, build, and maintain full-stack web applications for clients and internal products—including Declutah, a listing app where users can list whatever thrift product they have and connect with clients

willing to buy them.

- Develop frontend interfaces using JavaScript, HTML, CSS, and modern styling frameworks such as Tailwind CSS.
- Build and integrate backend services using Node.js and Express, including REST APIs and application logic.
- Collaborate with designers and product stakeholders to translate requirements into functional technical solutions.
- Debug, test, and optimize applications to ensure performance, reliability, and scalability.

Thrills Digital — Full-Stack Software Engineer (Dev Studio) Remote

- Contribute as a full-stack engineer in a development studio delivering production-ready digital products.
- Implement responsive frontend features and connect them to backend services and APIs.
- Support backend development using JavaScript, Node.js, and Express to power dynamic application behavior.
- Work closely with cross-functional team members to plan, build, and refine client solutions.
- Participate in code reviews, issue resolution, and continuous improvements across the stack.

Proattire Technology — Backend Engineer June 2023 - September 2024

- Built and maintained Proattire website with backend services that connect customers, dressmakers, and vendors for bespoke and ready-to-wear clothing.
- Implemented authentication, role-based permissions, vendor onboarding, and profile verification.
- Built order, payment invoice flows, transaction logging,

webhook processing, and automatic status updates.

- Optimizing database queries, adding pagination, and strengthening error and edge-case handling.

Emerj — Backend Engineer Sept 2025 - Jan 2026

- Contributed to building an enterprise AI-powered regulatory intelligence platform, Legal Watch Dog, using Nodejs and Expressjs
- Implemented backend features including web scraping of regulatory and policy sources, LLM integration for detecting and summarizing regulatory changes, and a ticketing and notification workflow to surface critical updates in real time
- Refactored admin module route files to improve maintainability by separating business logic into dedicated service layers and implementing custom exception handling for the admin dashboard
- Built and maintained admin features for scraping operations, customer management, LLM monitoring, and parallel monitoring workflows, improving observability and operational control
- Added and standardized OpenAPI (Swagger) documentation across backend modules to clearly define request and response contracts, handle edge cases consistently, and improve developer experience and API discoverability

Fullstack Developer – CrownFM - Full-time | September 2022 – November 2023

- Worked as a Software Developer and Technical Support, contributing to the maintenance and improvement of CrownFM's digital platforms and internal systems.
- Implemented and maintained authentication flows, role-based access control, and user management features to support staff and platform operations.

- Built and supported backend workflows including data handling, system integrations, logging, and automated status updates.
- Provided technical support by diagnosing issues, optimizing system performance, handling edge cases, and ensuring smooth day-to-day operations.

**ADEM Group of Schools — Computer Science Instructor
Jan 2022 - July 2022**

- Taught computer science and computer-related courses, covering foundational computing concepts and practical digital skills.
- Delivered hands-on lessons using real-life examples to help students understand both theory and application.
- Led students through live projects, guiding them step by step from problem understanding to solution implementation.
- Assisted students with practical exercises and project work, providing feedback to improve learning outcomes.
- Collaborated with school staff to align lesson plans with academic goals and student development needs.
